

B18120

EMPLOYMENT STATUS BY DISABILITY STATUS AND TYPE

Universe: Civilian noninstitutionalized population 18 to 64 years
2017 American Community Survey 1-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

	Washington County, Wisconsin	
	Estimate	Margin of Error
Total:	81,624	+/-305
In the labor force:	70,390	+/-1,546
Employed:	69,317	+/-1,644
With a disability:	2,547	+/-685
With a hearing difficulty	1,138	+/-458
With a vision difficulty	355	+/-296
With a cognitive difficulty	941	+/-479
With an ambulatory difficulty	605	+/-284
With a self-care difficulty	73	+/-89
With an independent living difficulty	260	+/-216
No disability	66,770	+/-1,784
Unemployed:	1,073	+/-452
With a disability:	121	+/-153
With a hearing difficulty	0	+/-151
With a vision difficulty	46	+/-79
With a cognitive difficulty	75	+/-130
With an ambulatory difficulty	0	+/-151
With a self-care difficulty	0	+/-151
With an independent living difficulty	0	+/-151
No disability	952	+/-422
Not in labor force:	11,234	+/-1,461
With a disability:	3,407	+/-1,080
With a hearing difficulty	703	+/-475
With a vision difficulty	655	+/-470
With a cognitive difficulty	1,925	+/-935
With an ambulatory difficulty	2,630	+/-981
With a self-care difficulty	538	+/-412
With an independent living difficulty	1,501	+/-615
No disability	7,827	+/-1,083

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling

variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2017 American Community Survey (ACS) data generally reflect the July 2015 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas, in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
